

Video time (mins)	Sediment type	Percentage Coverage (%)	Bedforms	Fauna /flora Species of note
1	n/a	n/a	n/a	n/a
2	n/a	n/a	n/a	n/a
3	coarse sandy / maerl beds, biogenic	60% sediment, biogenic covered in bivalves and rhodo and/or phaeophyta cannot distinguish due to low resolution	straight transverse	Rhodophyta and/or phaeophyta cannot distinguish or identify further due to low resolution
4	coarse sandy / maerl beds, biogenic	65% sediment, biogenic, abundant in bivalves. Cannot accurately measure percentage cover of flora due to low resolution and shadowing.	straight transverse	Mainly rhodophyta and chlorophyta individual present but cannot distinguish some individuals due to poor quality
5	sandy, cannot determine whether fine or coarse	90% sediment, 5% chlorophyta, 5% bivalves	straight transverse	Chlorophyta present cannot identify, image too blurry low resolution. Bivalves present cannot identify any further.
6	sandy cannot be completely certain whether sediment is coarse or fine	95% biogenic sediment, 5% bivalves	straight transverse	bivalves present cannot identify further
7	n/a	n/a	n/a	n/a
8	n/a	n/a	n/a	n/a
